Custom Concrete & Restoration

One of DelGrosso Design specialties is **carved concrete**. The process includes installation of special vertical high-build cement. As the cement sets, we custom carve crevices, nicks and holes just like they are present on natural stone formations. The cement can be waterproofed when building water features resembling natural creeks, streams and springs. These concrete formations can be used to transform standard spaces into cave-like structures and incredibly unique objects as well.

The cement formations are hand carved, then stained with multiple pigments to recreate the look of natural stone. Color stain and a coat of sealer then is applied to block in and protect the work.

Typical applications are:

- ❖ landscaping walls
- ❖ retaining walls
- ❖ house walls
- ❖ waterfalls and ponds
- ❖ stones and boulders
- ❖ rock formations
- ❖ outdoor kitchens
 - ❖ fire pits
 - ❖ bath tubs
 - ❖ pool copings
- ❖ pool water features
 - ❖ wine caves
- ❖ fireplace surroundings
- ❖ pools and hot tubs
