

Diamond Polished Cement Toppings

These are among the most beautiful, innovative, and durable floors available on the market. Unlike commercial grade epoxy terrazzo, our floors are made with an extremely high-quality cement matrix and do not require (but allow for) use of aggregate. The result is a stunning floor with the feel and durability of diamond polished concrete and an unmatched mirror reflectivity. Colors can be completely customized by using integral pigments and color dyes. Because of its look and durability, this high-end floor is now widely sought after on residential and commercial settings.

Custom Graphics – Your floor can be further customized by adding a logo, motto, coat of arms, even a stylized graphic. The art work is hand-made using different techniques, including stenciling, metal inlays and score lines.

Aggregate – Unlike the classic commercial grade terrazzo, our floor does not require, but allows for, the use of aggregate. Colored glass and decorative stone aggregate can be added to the cement matrix to create unique and stunning effects.

Maintenance – The durability of our diamond polished cement toppings is **extreme**. Our diamond polished surfaces are the most resilient and easy to maintain on the market and perform much better than any epoxy or industrial coating. These floors are also very easy to clean. We recommend periodic maintenance to keep the floor in tip top shape for decades to come. Visit our website www.delgrossodesign.com for more detailed information on how to clean and maintain your floor.

The process – Once the existing structural concrete slab has been properly repaired and prepared by grinding or shot-blasting, an epoxy bond layer with sand broadcast to refusal is applied, zinc or brass divider are installed on moving joints, then a ½" layer of high strength engineered cement is installed. Once the cement sets, it is diamond refinished and polished to a mirror reflective look. A lower sheen is also possible, whenever requested.

Color selection – *Ameripolish* makes a line of integral pigments (**OS System**) and penetrating dyes (**Surelock Dyes**) especially formulated for TRU self-leveling cement pigmentation. With a combination of this two coloring products it is possible to completely customize the look of your floor.
